Dr. Christine Hopkins at Advanced Dental Center provides the most sophisticated, personalized and relaxing dental care available in North Texas. Placing an emphasis on trust and strong relationships, she practices at a slow pace to devote her undivided attention to each patient.

Educated at University of Texas, Health Science Center in San Antonio—the top dental school in the nation—she graduated with eight prestigious awards and went on to earn a certificate in advanced prosthodontics and a masters in science in oral biology. Only two percent of dentists in the United States have completed the level of training and education Dr. Hopkins has undergone. Not only does she attend numerous continuing education conferences to stay ahead, she accompanies her staff to management classes to ensure the highest level of customer care. “Patients who choose us are those individuals who want a team devoted to their personal well-being,” she said. “I provide the level of care that I would want for my own family.”

Her dedication to training parlays into educating you, the patient, as well. She utilizes intra-oral cameras, 3-D imagery, digital X-ray, a laser detection tool, and a multi-media teaching system to present in-depth information to patients.

Dr. Hopkins specializes in implant dentistry, adding yet another tool to her comprehensive care for providing a natural, youthful smile and complete functionality. Denture patients no longer worry about eating and talking; gum disease patients can overcome their smile embarrassment. It is life-changing dentistry.

Dr. Hopkins urges people, during tighter economic times, not to neglect their dental hygiene. “We work with our patients on every aspect of their visits, including payment and time frame, to develop a plan that respects their life now while keeping a focus on long-term dental goals.
